Photographic Requirements:

Photographs included with applications must contain the following:

- Photographs showing the full length of the fish, the rod and reel used to make the catch, and the scale used to weigh the fish must accompany each record application.
- A photograph of the angler with the fish is also required.
- An additional photograph of the fish on the scale with the actual weight visible is helpful. If you cannot get a visible photo of the fish and scale together, take a photo of the fish hanging on the scale and then a separate zoomed photo of just the scale with the weight visible.
- For species identification, the clearest possible photos should be submitted. This is especially important in the cases of hybrids and fishes that may be confused with similar species.
- When photographing a fish lying on its side, the surface beneath the fish should be smooth and a ruler or marked tape placed beside the fish if possible alternatively a scalable object (Beer can, cigarette box or similar). Photographs from various angles are most helpful.
- It is important that we have clear, publishable photographs of the fish and the angler, including action shots, if available.
